

WIC Responder

WIC Responder is a content management tool that synchronizes an organization's most important content with the BlackBerry® smartphone. Ensure your mobile workforce is informed, and that their everyday business decisions are based upon the most up to date and accurate information.

- **Content at your fingertips - literally:**

- > Updated documents and images behind an organization's firewall are monitored and updates are automatically pushed to and stored on the BlackBerry smartphone
- > Mobile workers are always just a click or two away from the most up-to-date information, regardless of their physical location or network coverage

- **Network and memory optimization:**

- > WIC compresses documents to significantly smaller file sizes before wirelessly synchronizing them with the BlackBerry smartphone
- > BlackBerry can now store 100's of documents without impacting day-to-day functions

- **Add a mobile layer without re-inventing processes or systems:**

- > WIC Server mobilizes documents stored on the corporate network, (such as MS Word including inline tables and images, MS Excel, HTML and images)

"The next time we have an emergency, no one is going to be scrambling trying to find their business continuity crisis management binder and backup plans. They will already have them right there, on their BlackBerry device."

Juliet Clarke
Sun Life Financial

WIC

System requirements:

- BlackBerry smartphones with operating systems v4.2 and up.
- P4 server with minimum 2.5G clock speed, 1Gb RAM, 6Gb hard drive.
- Windows XP Service Pack 2 or Windows Server 2003. Virtualization supported.
- Access to MS SQL 2000 or 2005.
