

WIC DB

WIC DB mobilizes existing corporate database applications by enabling users to view, synchronize and edit information from their BlackBerry smartphones. Customized mobile solutions that used to take days or even weeks to develop can be created in a point and click environment in a few short hours.

- **Add a mobile layer without re-inventing processes or systems:**

- > Dynamically access and synchronize data between BlackBerry devices and almost any corporate database: SQL, DB2, Oracle, Lotus Notes and many others
- > Direct database access often eliminates the need to modify existing systems for mobile access

- **IT management and control:**

- > Allow administrators to control which databases, tables, and even columns are accessible to mobile users by leveraging the database's existing security parameters

- **Out of the office, but still connected:**

- > Any new or modified records that have been updated by other users or systems are automatically pushed out to the BlackBerry, ensuring that the mobile user always has the most up to date information

- **Powerful tools for the mobile worker:**

- > Allow users to filter and control synchronization, conduct advanced searches, and add, delete and modify records, even when offline

- **Increased productivity, significant cost savings:**

- > Make informed business decisions and provide better customer service with more accurate and timely information

Wireless access to our SIS (Student Information System) is a key component to meeting our ADA (Average Daily Attendance) goals and improving our Incident Response times. The Wallace Wireless application is easy to use and does exactly what it's supposed to do, help us meet our goals."

Craig Guensler, Assistant Superintendent of Human Resources, Yuba City Unified School District

System requirements:

- BlackBerry smartphones with operating systems v4.2 and up.
- P4 server with minimum 2.5G clock speed, 1Gb RAM, 6Gb hard drive.
- Windows XP Service Pack 2 or Windows Server 2003. Virtualization supported.
