

WIC Forms

WIC Forms is a powerful mobile solution with straight-forward tools to create, deploy, and capture the results of forms that are filled out on BlackBerry smartphones. WIC Forms increases the productivity of mobile workers, and facilitates informed business decisions based on more accurate and timely information.

- **More accurate and timely data capture:**

- > Simple, intuitive electronic forms are filled out by mobile employees on-site while the information is top-of-mind
- > No more paper means no more illegible scribbles to decipher at the end of every day

- **Increase productivity, save money:**

- > The productivity of your mobile workforce is increased by reducing or eliminating the need for frequent (and costly) visits to the office

- **Easy to setup, easy to use:**

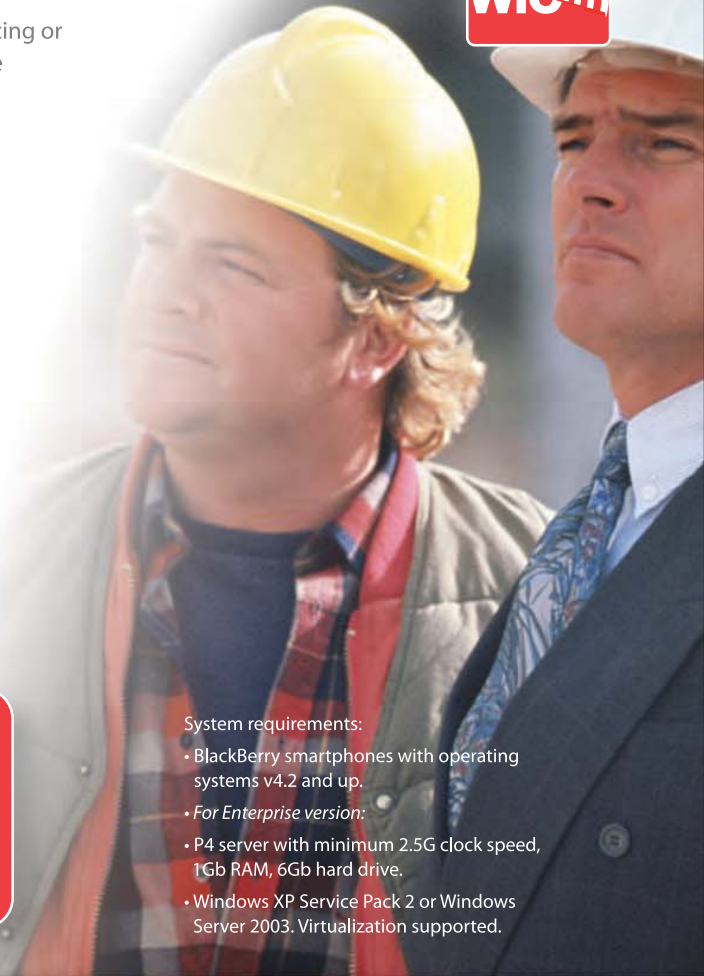

- > Forms are setup quickly using the templates provided, or customized with a simple point-and-click design tool
- > Back-end complexity is hidden from the customer – creating and sending forms is straight-forward and intuitive

- **Hosted or Enterprise version:**

- > Hosted solution is web-based and requires no IT involvement to get up and running quickly
- > Enterprise version can connect to existing corporate databases and integrate with existing workflows

- **Feature-Rich:**

- > Go beyond the basics quickly and easily by adding the GPS location of the worker when the form is submitted
- > Leverage Bluetooth accessories, for example scanning barcodes into the forms

"WIC Mobile Forms gave us accuracy on the data collection side because we weren't relying on someone writing down numbers and locations correctly. Plus, we get the information faster!"

Mamdouh Mina
Peterborough County-City Health Unit

System requirements:
